WHAT IS LORAWAN?

LORAWAN

- LoRa (Long Range): Radio modulation technique
- LoRaWAN: MAC protocol for Wide Area Networks (OSI Layer 2 and 3)

**sensors
nodes**

LoRa

gateways

ip

backend

ip

**application
backend**

LORAWAN

3 * 10

10 km range

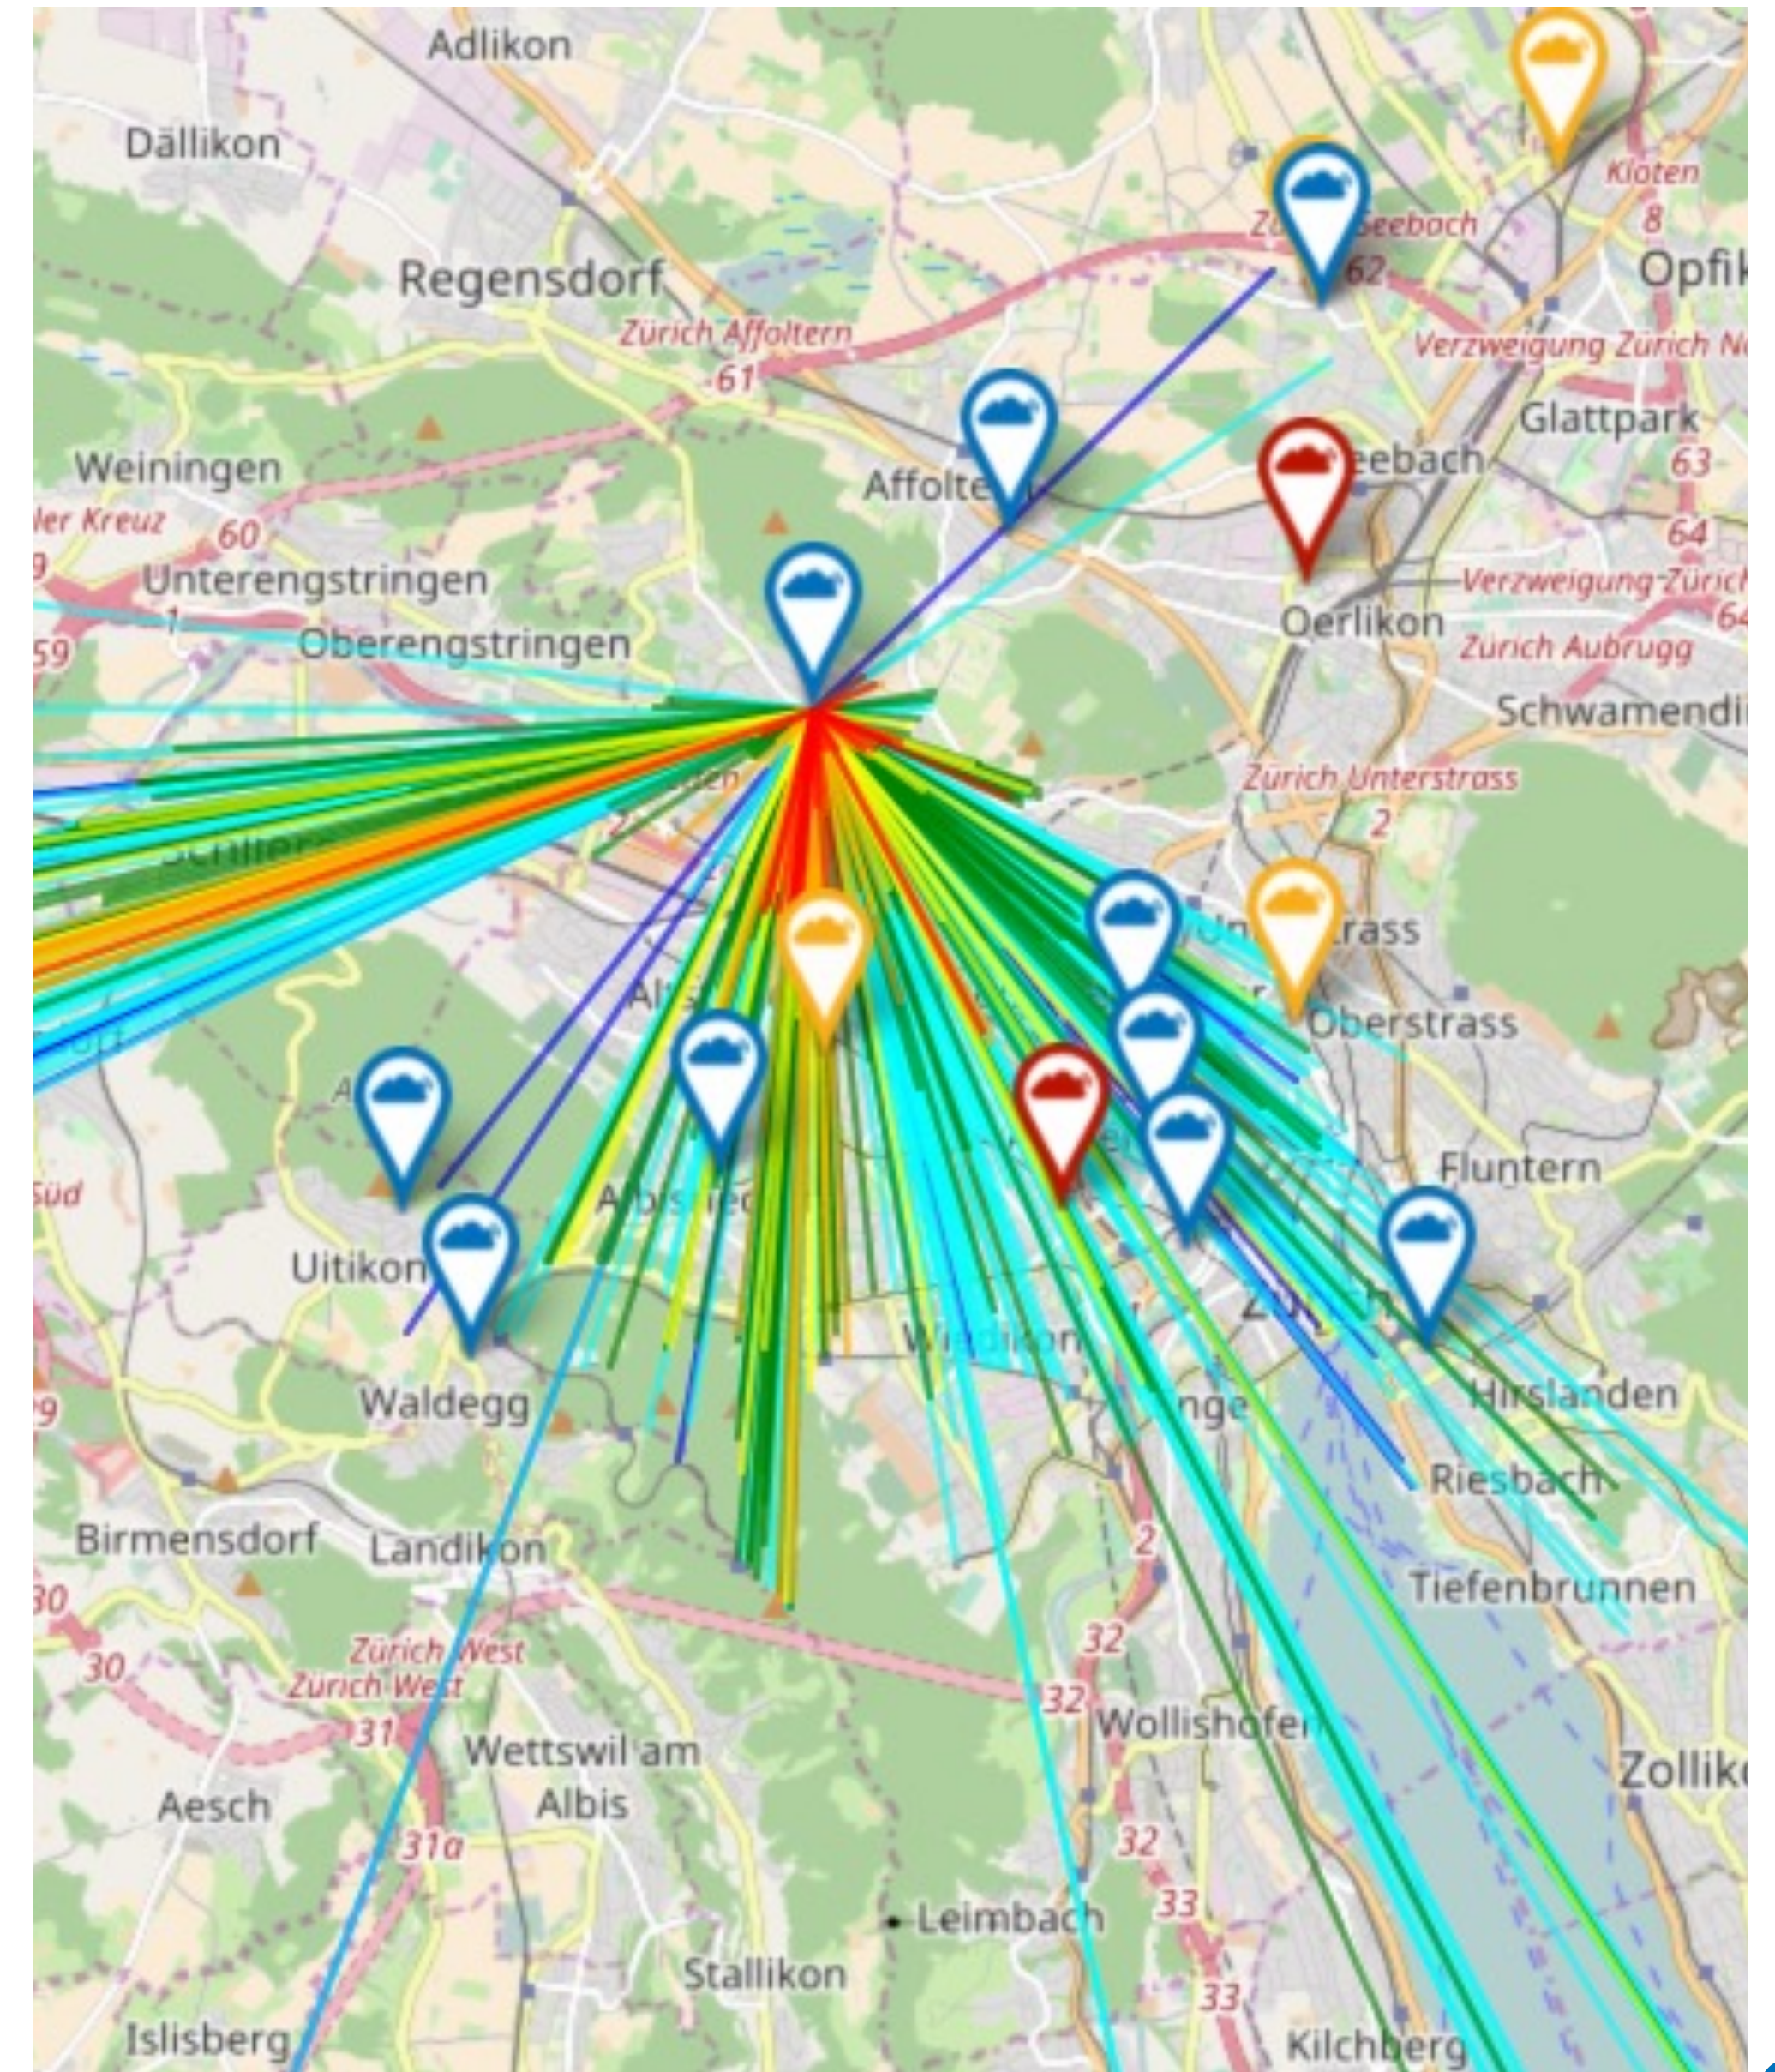

10 USD/node

10 years battery life

LONG RANGE

2km - 5km in urban setting

40km+ in rural setting

INSANELY LONG RANGE

(under extreme conditions)

201 km ground-to-ground

by Andreas Spiess, TTN Basel

<http://www.sensorsiot.org/>

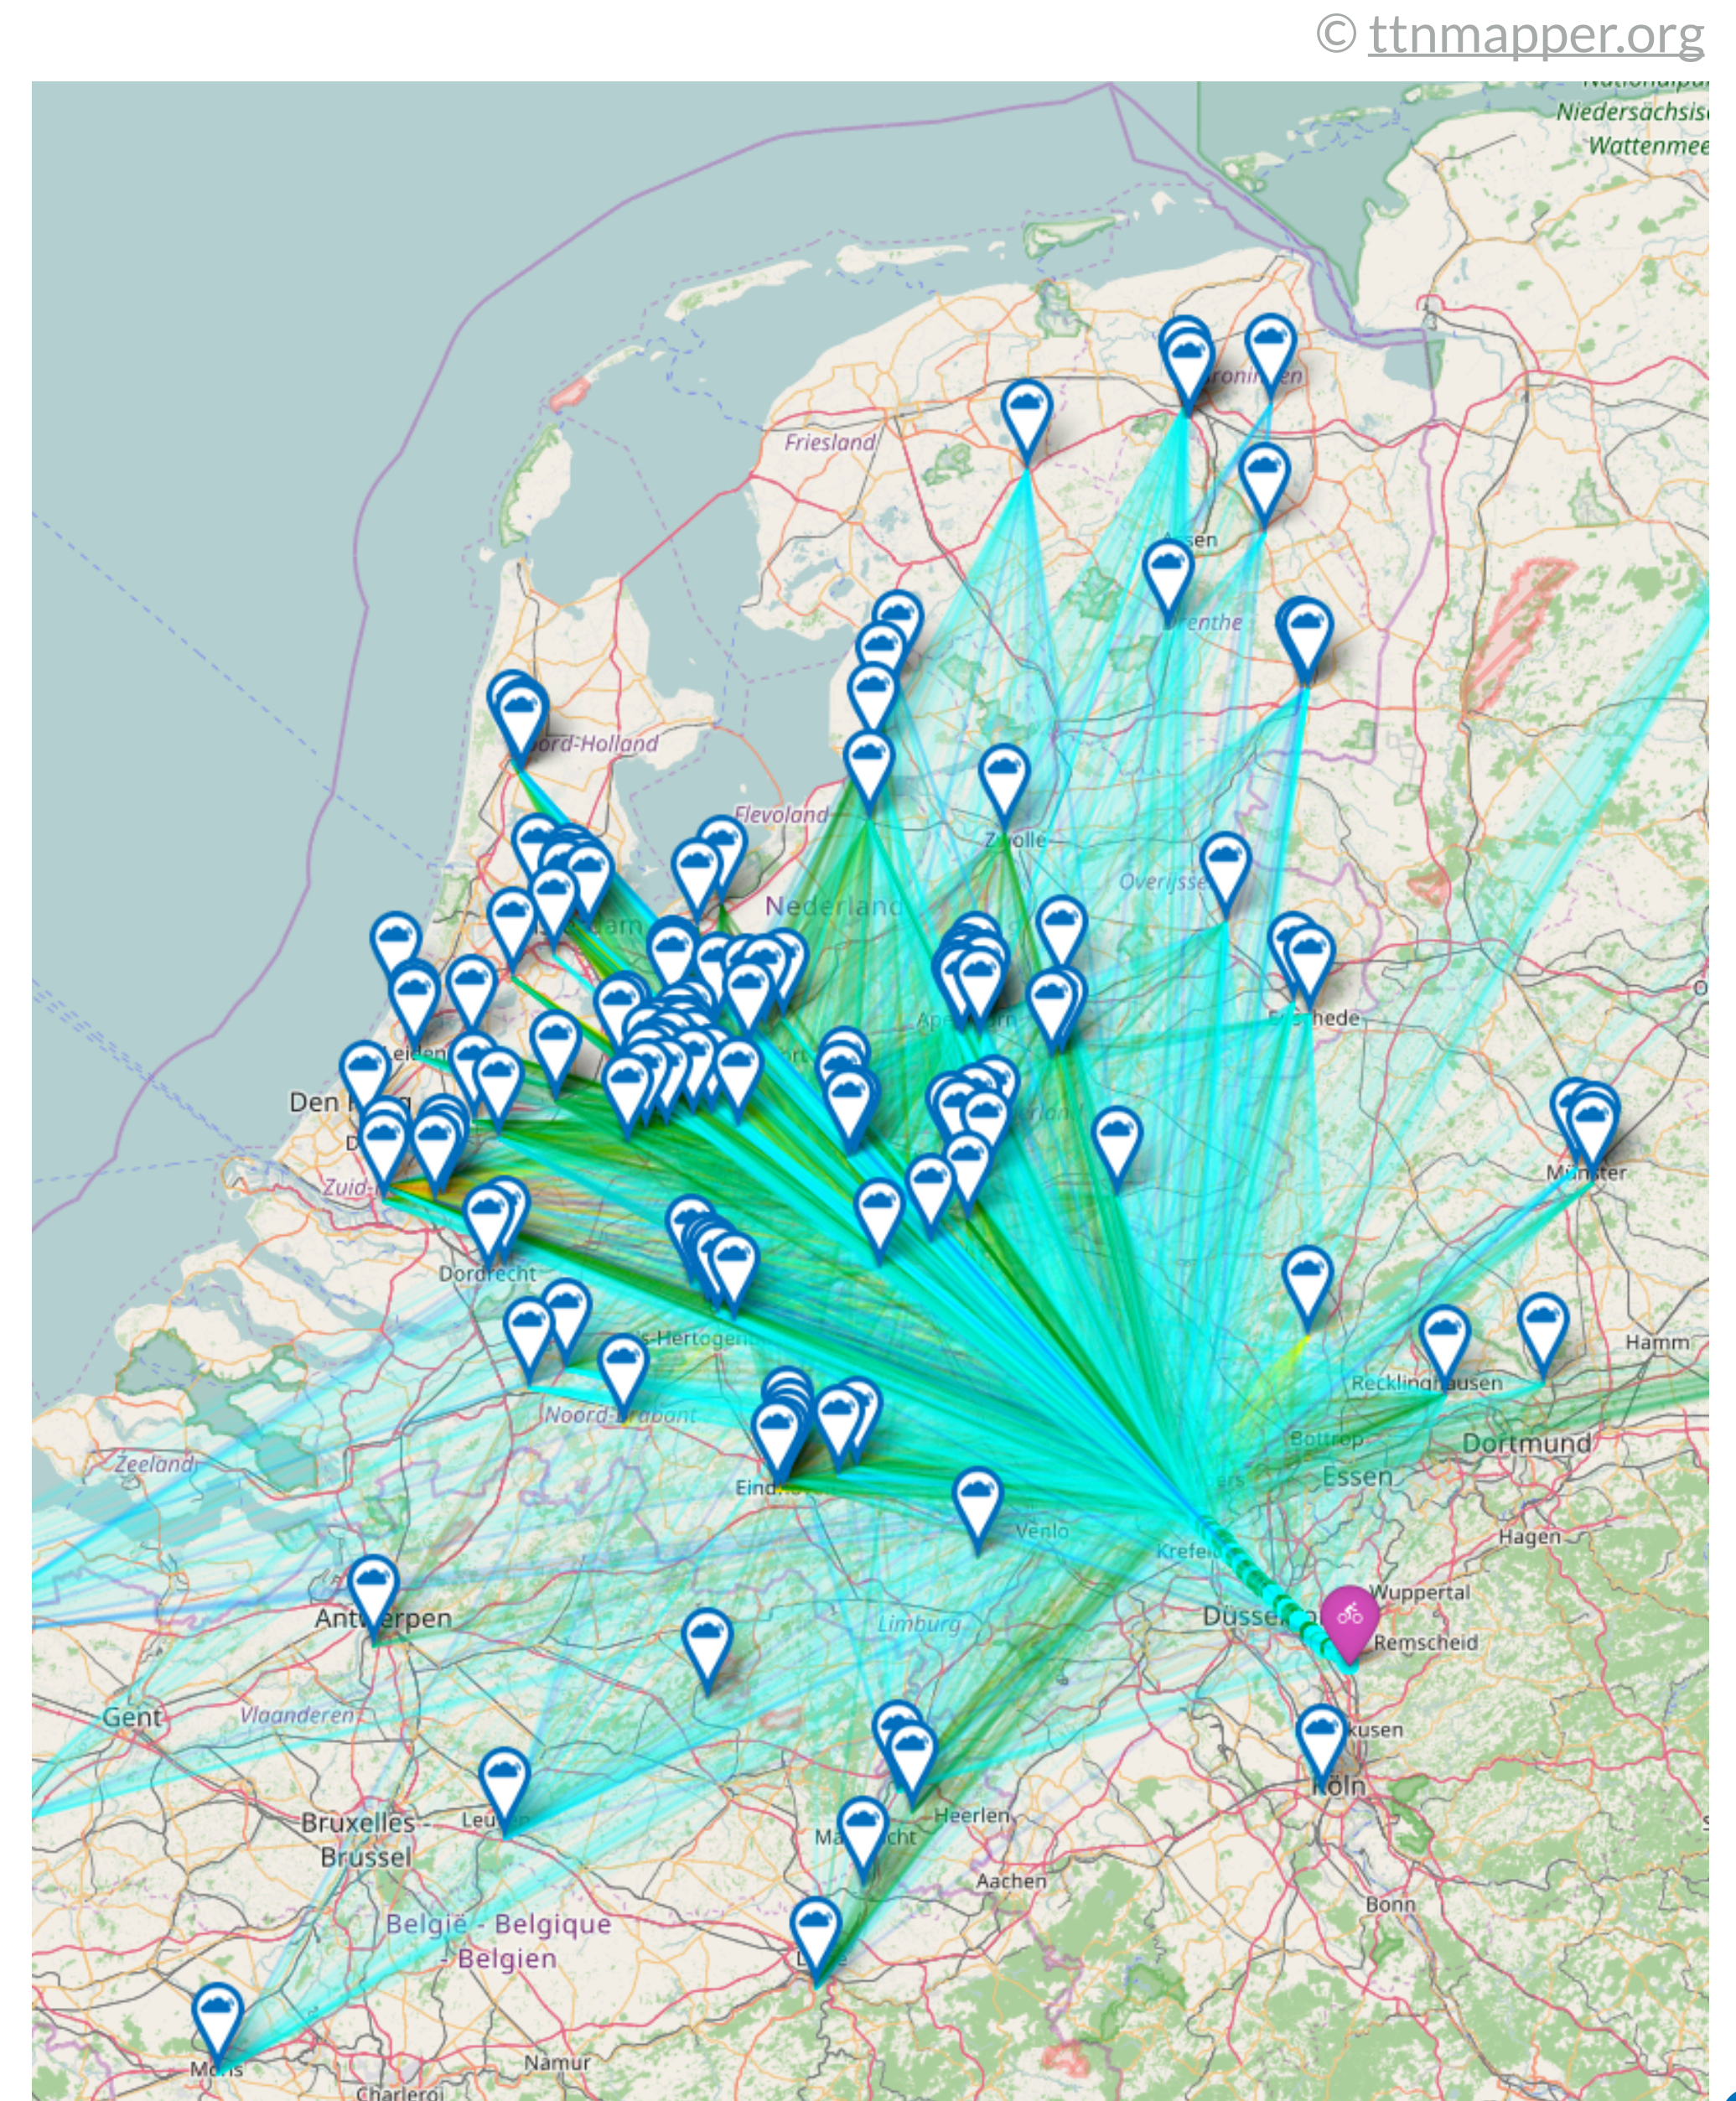

INSANELY LONG RANGE

(under extreme conditions)

333 km air-to-ground (helium balloon)

by @telkamp (mapping @jpmeijers)

LOW COST

- ✓ Node/transceiver: CHF 8.5
- ✓ Gateway: ~CHF 250 (indoor)
- ✓ Open source stack + ISM bands
- ✓ Low CAPEX, almost negligible OPEX

 **htdvisser** Clarify payload conversion error Latest commit 7da6ca5 2 days ago

.env	Make Discovery server use TLS	a month ago
.github	Prepare docs for v2.0.0	4 months ago
amqp	Correct use of goroutine and updating test	10 days ago
api	Ensure correct memory alignment for 32 bit systems	11 days ago
cmd	Sleep on leading edge of pprof loop	11 days ago
core	Clarify payload conversion error	2 days ago
mqtt	Add MQTT docs for downlink scheduling	29 days ago
ttnctl	Integrate payload format in ttnctl	14 days ago
...	using int64 for 386 architecture	11 days ago

<https://github.com/TheThingsNetwork>

OPEN SOURCE BACKEND

UNLICENSED SPECTRUM

Anyone can deploy a LoRaWAN network!

LOW POWER

Class A

Always send,
receive after send.

Up to 10 years.

Deep sleep: $\sim 10 \mu\text{A}$
TX $\sim 40 \text{ mA}$
RX $\sim 14 \text{ mA}$

Class B

Time-synchronized
receive windows.

Not supported

Class C

Always-on receive
mode.

Support not ready,
but planned

LIMITATIONS

Bandwidth

0.3 bps to 50 kbps

Payload size

51 bytes (DR0)
222 bytes (DR4)

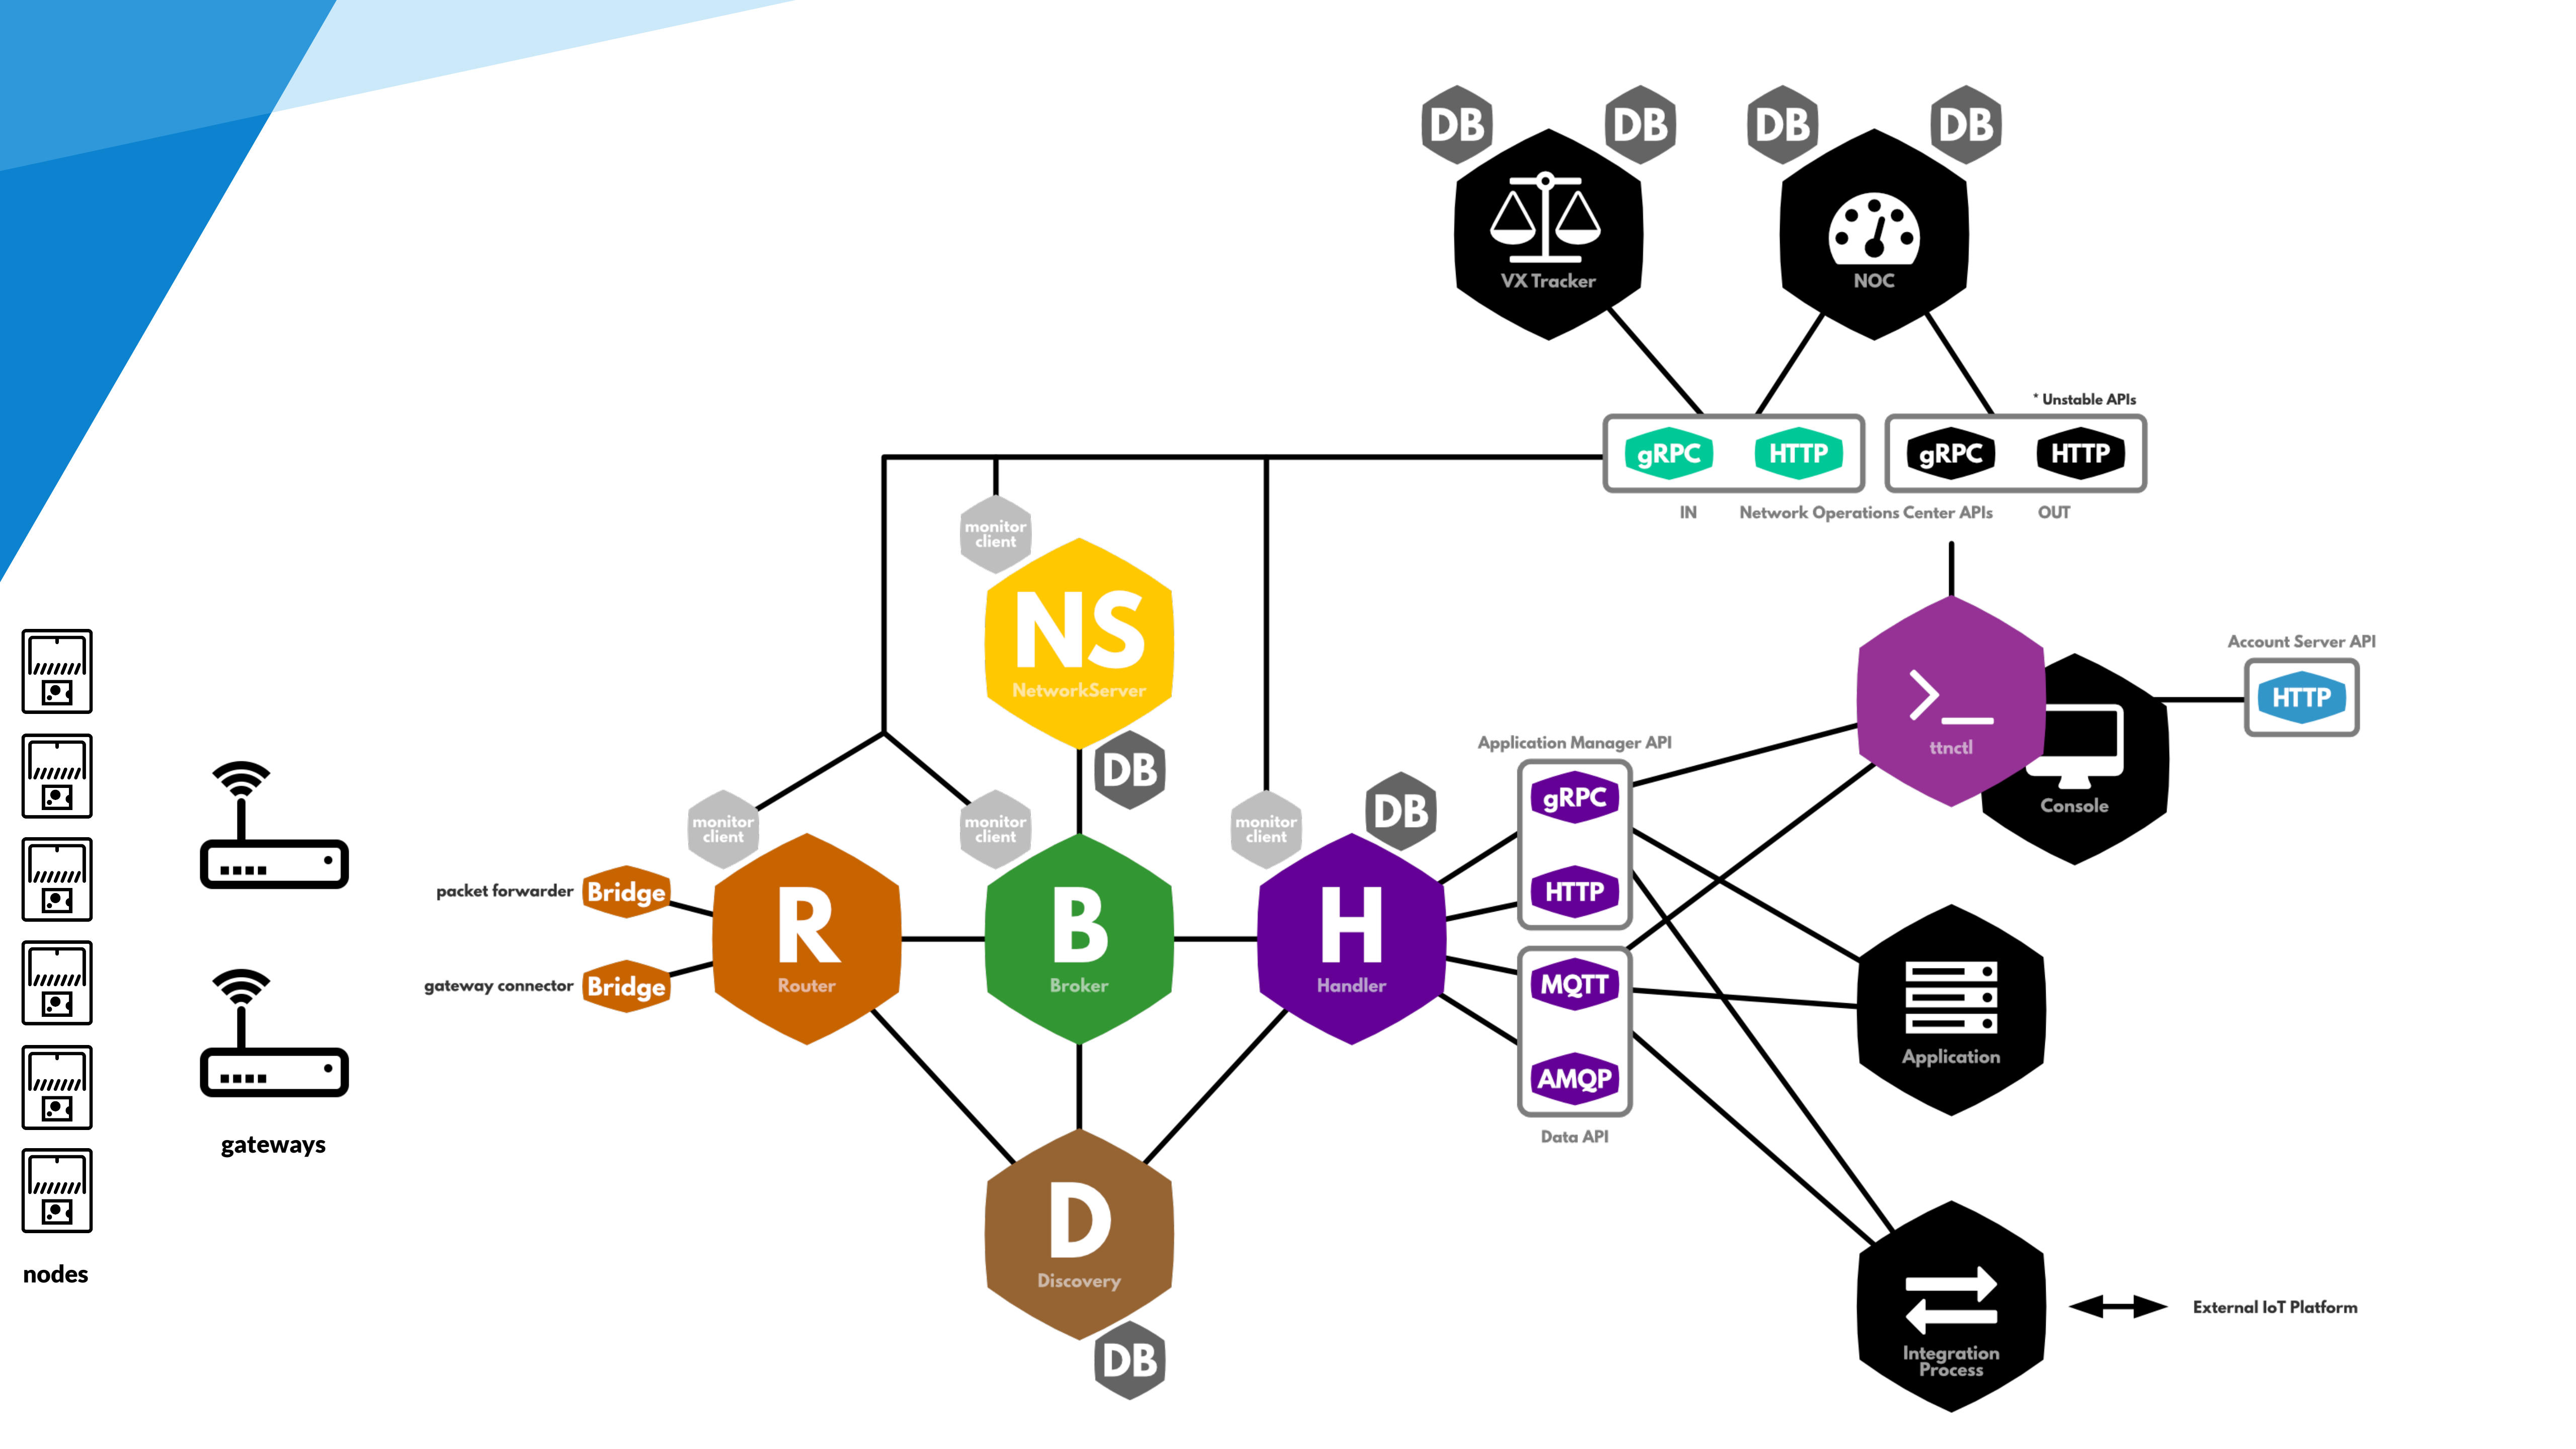

Regulatory limits

1% Duty Cycle

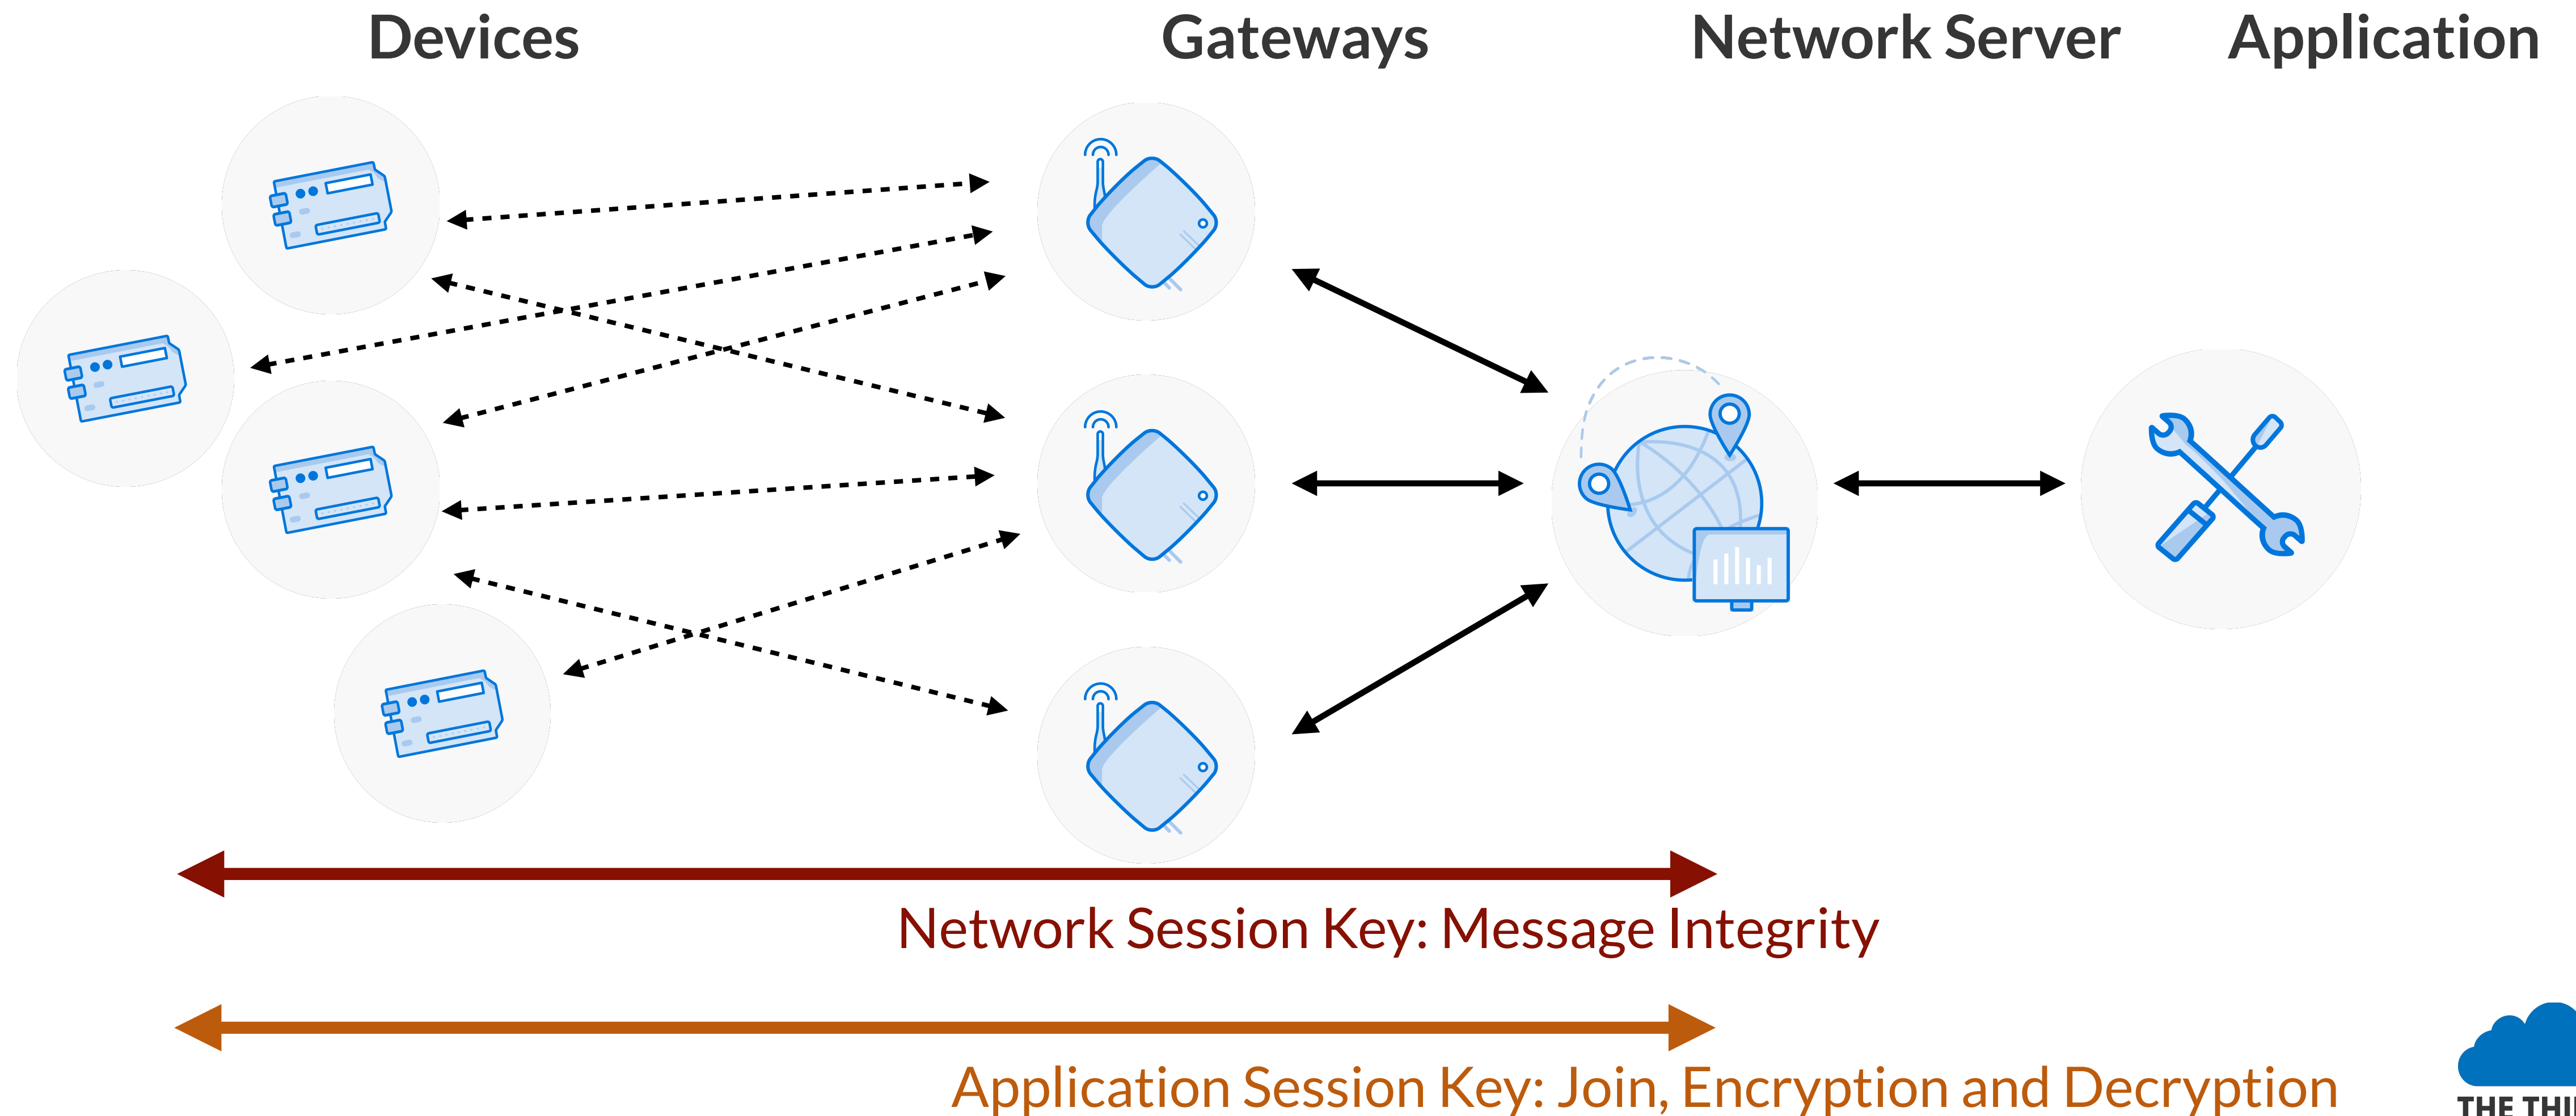

Fair usage policy

30 seconds/day airtime
10 downlinks/day

ARCHITECTURE

END-TO-END SECURITY
